RCS | REMOTE CRANE SERVICE

Remote Crane Service allows you to monitor, diagnose and program your XT & XS Series Drives and CID Hoist Monitor or PLC wirelessly with any IBM compatible PC. In addition, if an internet connection is available, you are able to control these same features from anywhere in the world.

Remote Crane Service utilizes a wireless interface along with an Ethernet to serial converter which allows you to interface with a VFD, CID Hoist Monitor or PLC.

Remote Crane Service with our optional Email Server can alert you via email that a drive has faulted or that a lift has exceeded the rated capacity. (Internet connection, load cell and hoist monitor equipment is also required.)

THE TOOLS ARE INTENDED FOR TASKS SUCH AS:

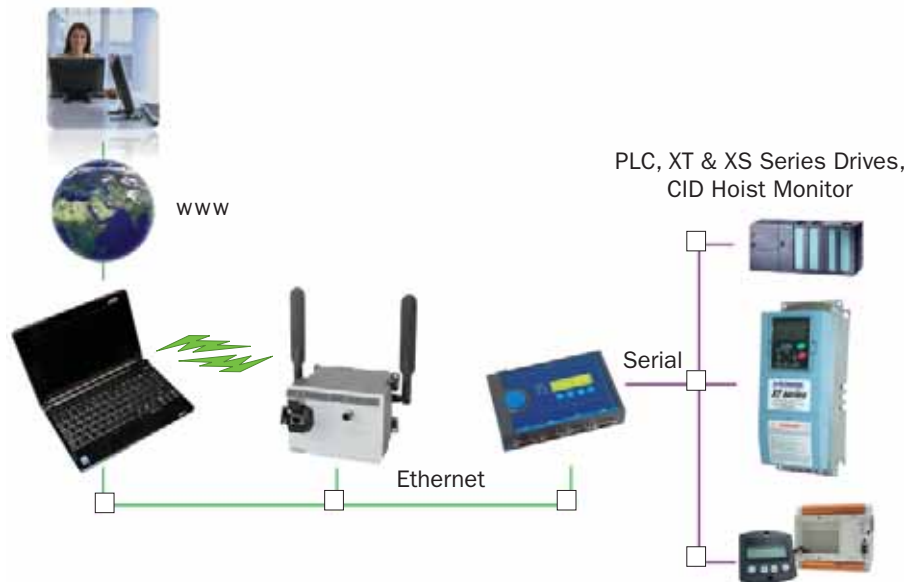

- > Commissioning
- > Monitoring
- > Loading various applications
- > Application programming

NCDRIVE SOFTWARE

The NCDrive software is the commissioning and monitoring tool for the XT & XS Series Drive products. It allows you to:

- > Download and upload parameter sets between the drive and the PC
- > Compare parameter sets
- > Change the active application
- > Save and print parameters and service reports to file or paper
- > Set references
- > Operate the NXP data logger, and more

The NCDrive software also allows you to monitor up to eight user-specified variables simultaneously on a graphical trend screen, and to save these on your hard disk for later analysis.

Part Number	Description
4760001	1 Port Interface 300 meter line of sight
4760002	4 Port interface 300 meter line of sight
4760003	4 Port interface 1000 meter line of sight
4760004	8 Port interface 1000 meter line of sight
4760005	RCS Remote Email Server
4740001	Wireless computer, pre configured
